

Important: FormsModule is Required for Two-Way-Binding!

Important: For Two-Way-Binding (covered in the next lecture) to work, you need to enable the `ngModel` directive. This is done by adding the `FormsModule` to the `imports[]` array in the AppModule.

You then also need to add the import from `@angular/forms` in the app.module.ts file:

```
import { FormsModule } from '@angular/forms';
```
