

Project Cleanup

There's one thing I forgot to clean up here (will be cleaned up later in the course). Feel free to do the cleanup right now though.

Our app.component.html file looks like that:

```
1. <app-header (featureSelected)="onNavigate($event)"></app-header>
2. <div class="container">
3.   <div class="row">
4.     <div class="col-md-12">
5.       <router-outlet></router-outlet>
6.     </div>
7.   </div>
8. </div>
```

The `(featureSelected)="..."` event listener is a relict of our "old" navigation approach using ngIf. We no longer need it, so feel free to change this template to:

```
1. <app-header></app-header>
2. <div class="container">
3.   <div class="row">
4.     <div class="col-md-12">
5.       <router-outlet></router-outlet>
6.     </div>
7.   </div>
8. </div>
```
