

Creating a New App Correctly

MUST READ

In the next lecture, we set up the course project.

Make sure, you do create that app by also adding the `--no-strict` flag to the `ng new` command - otherwise you will run into issues later on (we'll still dive into that "Strict Mode" later in the course of course, no worries)!

We'll also install the Bootstrap CSS Framework and in this course, we use version 3 of the framework. Install it via `npm install --save bootstrap@3` => The `@3` is important!

Additionally, when using a project created with Angular CLI 6+ (check via `ng v`), you'll have an `angular.json` file instead of an `.angular-cli.json` file. In that file, you still need to add Bootstrap to the `styles[]` array as shown in the next video, but the path should be `node_modules/bootstrap/dist/css/bootstrap.min.css`, **NOT** `../node_modules/bootstrap/dist/css/bootstrap.min.css`. The leading `../` must not be included.

Also see this lecture - I do show the complete setup process there: <https://www.udemy.com/the-complete-guide-to-angular-2/learn/v4/t/lecture/6655614/>

If you're facing any problems, please have a look at this very thorough thread by Jost: <https://www.udemy.com/course/the-complete-guide-to-angular-2/learn/lecture/17862130#questions/10444944>
